Martin Garcia, M.D.
Residente de Radiodiagnostico
Hospital Universitario San Carlos
Ciudad Universitaria
28040 - Madrid
SPAIN

Dear Dr. Garcia:

I am pleased to see that you are interested in coming to San Francisco to work with us. Our vascular imaging research has been very successful in the past six months. Some of the projects we are working on include MR angiography of the feet in diabetics in order to plan revascularization procedures, cardiac gated velocities of carotid arteries and comparison with Doppler ultrasound in patients with carotid disease, imaging of the aortic arch and carotid origins with a specially designed coil, and abdominal angiography using breathholding techniques. We have submitted four papers for publication in the last three months. I am certain we could find a good project for you to work on, and there is plenty for you to do.

As far as the clinical aspects of the program are concerned, I would recommend that you register with UCSF as a research fellow. This will give you an official status within the hospital. It will also allow you to use the educational facilities and to attend any courses at UC or in San Francisco. The charge for this registration is \$500 for six months. Amy Mendicelli will contact you about this.

There are several hospitals affiliated with UCSF. If you wish to join the readout sessions at the other hospitals, which include Moffitt Hospital, the San Francisco Magnetic Resonance Center, and San Francisco General Hospital, we will approach the relevant faculty at that time. I do not anticipate any problems with this.

You may have heard news about the San Francisco earthquake. I want to reassure you that there was no damage to our medical center or for that matter to the majority of the city.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Charles M. Anderson".

Martin Garcia Perez
Ministerio de Sanidad y Consumo
Instituto Nacional de la Salud
Hospital Universitario San Carlos
Ciudad Universitaria
28040-Madrid

Dear Dr. Perez,

Dr. Margulis has passed on to me your letter of inquiry regarding our MRI program. Currently, MRI is performed at three hospitals, the UCSF-Moffitt hospital, which has several GE Signa scanners, the San Francisco VA hospital, which has both a SIEMENS and Philips machine, and the San Francisco General Hospital, which has a Diasonics imager. I am inviting you to spend several months at my hospital, which is the VA Medical Center, to participate in both our clinical MRI program, as well as our research program in vascular imaging. If you register as a visiting fellow with the post graduate education office, then you will also be free to visit UCSF hospital to sit in on their clinical readouts. My experience with visiting fellows has been that simply attending the film interpretations can be very boring and therefore I urge you to become involved in our research program as well, particularly since this may lead to a publication.

I have enclosed a sheet summarizing some of our research interests. Currently we perform about 2 MR angiograms a day in addition to our regular clinical load. The VA Medical Center also has a distinguished spectroscopy laboratory which is run by Drs. Michael Weiner and Andrew Maudsley.

Please write me directly if you have any questions regarding our program.

Sincerely,

A handwritten signature in cursive script, appearing to read "C. M. Anderson".
